APPLIED STOCHASTIC PROCESSES
(COURSE 18-751)
HOMEWORK 1

Daniel Marew

August 31, 2017

1 prove with Venn diagrams

(a) $A \cap B^c = A - B$

(a) B^c

(b) $A \cap B^c$

(c) $A - B$

this implies $A \cap B^c = A - B$ is true

(b) $A \cup B^c = (A^c \cap B)^c$

(a) B^c

(b) $A \cup B^c$

(c) $A^c \cap B$

(d) $(A^c \cap B)^c$

this implies $A \cup B^c = (A^c \cap B)^c$ is true

(c) $B - A \neq A - B$

(a) $B - A$

(b) $A - B$

this implies $B - A \neq A - B$ is true

2

(a) Irreducibility and periodicity

The Markov Chain is irreducible because we can go from any of the states to the other states in finite number of steps. It is also aperiodic [Justify]

(b) invariant distribution π

$$\pi_j = \sum_{k=0}^n \pi_k p_{kj} \quad (1)$$

$$\pi_0 = \pi_0 P_{00} + \pi_1 P_{10} + \pi_2 P_{20} \quad (2)$$

$$\pi_1 = \pi_0 P_{01} + \pi_1 P_{11} + \pi_2 P_{21} \quad (3)$$

$$\pi_2 = \pi_0 P_{02} + \pi_1 P_{12} + \pi_2 P_{22} \quad (4)$$

$$(5)$$

$$P = \begin{bmatrix} 0.3 & 0.7 & 0 \\ 0.1 & 0.4 & 0.5 \\ 1 & 0 & 0 \end{bmatrix}$$

$$\pi_0 = 0.3\pi_0 + 0.1\pi_1 + \pi_2 \quad (6)$$

$$\pi_1 = 0.7\pi_0 + 0.4\pi_1 \quad (7)$$

$$\pi_2 = 0.5\pi_1 \quad (8)$$

$$\pi_0 + \pi_1 + \pi_2 = 1 \quad (9)$$

lets write everything in terms of π_0

$$\pi_1 = \pi_1 \quad (10)$$

$$\pi_2 = 0.5\pi_1 \quad (11)$$

$$\pi_0 = 0.3\pi_0 + 0.1\pi_1 + 0.5\pi_1 \quad (12)$$

$$0.7\pi_0 = 0.6\pi_1 \quad (13)$$

$$\pi_0 = \frac{6}{7}\pi_1 \quad (14)$$

$$\pi_0 + \pi_1 + \pi_2 = \frac{6}{7}\pi_1 + \pi_1 + 0.5\pi_1 = 1 \quad (15)$$

$$\frac{33}{14}\pi_1 = 1 \quad (16)$$

$$\pi_1 = \frac{14}{33} \quad (17)$$

$$\pi_0 = \frac{6}{7} \cdot \frac{14}{33} = \frac{4}{11} \quad (18)$$

$$\pi_2 = 0.5 \cdot \frac{14}{33} = \frac{7}{33} \quad (19)$$

Ans.

$$\pi = \left[\frac{4}{11} \quad \frac{14}{33} \quad \frac{7}{33} \right]$$

$$\pi \approx [0.3636 \quad 0.4242 \quad 0.2121]$$

(c) Expected Time from 0 to 2

$$\beta(2) = 0$$

$$\beta(0) = 1 + 0.7\beta(1) + 0.3\beta(0)$$

$$\beta(1) = 1 + 0.1\beta(1) + 0.4\beta(1) + 0.5\beta(2)$$

since $\beta(2) = 0$

$$\beta(1) = 1 + 0.1\beta(0) + 0.4\beta(1)$$

$$\beta(0) = 1 + 0.3\beta(0) + 0.7\beta(1)$$

$$0.7\beta(0) - 0.7\beta(1) = 1$$

$$0.6\beta(1) - 0.1\beta(0) = 1$$

solving the eqn n1 and n2 we get $\beta(0) = 3.708$ and $\beta(1) = 2.286$ so the expected time from 0 to 2 is 3.708

(d) Probability that starting from 0, the MC has reached 2 after n -steps vs n

Figure 4: Probability that starting from 0, the MC has reached 2 after n -steps vs n

(e) Expected Time from 0 to 2

Figure 5: Probability that starting from 0, the MC has reached 2 after n -steps vs n

(f) π_n vs n

Figure 6: π_n vs n

Q3

(a) Page Rank

we can rank the states by their value in the invariant distribution(π)

1. state(page) 2
2. state(page) 1
3. state(page) 3

(b) Page Rank

(c) Page Rank
